### **Interceptor™ Showcased in General Dynamics Executive Briefing Center as High-Tech Network Security Solution**

HICKORY, N.C. (February 15, 2010) – The [Interceptor™](#) Optical Network Security System – an alarmed carrier protective distribution system (PDS) that ensures the protection and availability of SIPRNet, JWICs and other classified networks transmitting national security information – is now being featured as an IT solution in the [General Dynamics](#) Executive Briefing Center in Rosslyn, VA.

The General Dynamics Executive Briefing Center is a facility created to host state-of-the-art multi-media presentations and leading-edge technology demonstrations for customers and partners of General Dynamics located in the Capitol District. The Interceptor PDS by [Network Integrity Systems](#) (NIS) was recently installed to be showcased along with other advanced network-centric technologies and communications systems offered by General Dynamics.

NIS collaborated with [Global Com Inc.](#), a premium-quality installer of structured cabling systems, to integrate Interceptor at General Dynamics' facility. Global Com features Interceptor as a flagship product to support its secure network infrastructure capabilities.

Interceptor has been deployed since 2003 within the Intelligence community and in support of numerous facilities and installations across the Department of Defense, Department of Justice, Department of Homeland Security and all branches of the United States military.

Today, Interceptor is the only commercially available alarmed carrier PDS developed under Department of Defense guidance and financing specifically for information assurance and IT security applications. In addition to protecting classified networks and national security information, Interceptor has also been deployed to facilitate increased collaboration and information sharing for anti-terrorism activities and to ensure continuity of operations (COOP) and availability of command and control networks, as well as critical infrastructures across the United States.

## **About Network Integrity Systems, Inc.**

Network Integrity Systems specializes in solutions for the protection of secure networks and critical infrastructures. Network Integrity Systems is also a founding partner of Communication Supply Corporation's Secure(it) program – focused on enhancing the security and availability of high assurance networks and facilities throughout the Department of Defense and federal government. Visit [www.networkintegritysystems.com](http://www.networkintegritysystems.com) for more information, or call 1-877-4PDS.
