

# INTERCEPTOR™ Optical Network Security System

## Certifications, Approvals and Deployments

### ***INTERCEPTOR™ Certifications and Approvals***

As an Alarmed Carrier Hardened Protected Distribution System (PDS) compliant with the requirements of **NSTISSI 7003**, the instruction that governs the transmission of unencrypted National Security Information, INTERCEPTOR is a fully approved PDS option. INTERCEPTOR is approved up to SCI level data classification and therefore can be used on both SIPRNet and JWICS networks.

INTERCEPTOR also complies with PDS requirements outlined in:

***Air Force Instruction AFI 33-201***  
***Army Regulation AR 25-2***  
***Navy Instruction NAVSO P-5239-22***

Listed on the US Air Force Communication Agency's Approved Product List of Alarm Systems for Protected Distribution Systems.

Listed on the US Navy TEMPEST PDS Approved Product list.

Within Army, the G6 Office as well as the Tempest Office will attest to the authority to use INTERCEPTOR.

Reviewed by the DISA DSAWG and confirmed as a viable tool for SIPRNet protection (as approved by local DAA).

Reviewed by DISA Joint Interoperability Test Center (JITC) and DOD/JC IA. INTERCEPTOR is a Layer 1 Product with no daa interface or IOP testing required.

A sponsor has been identified for Army Networkiness certification and INTERCEPTOR is awaiting evaluation.

*According to a March 2009 Emission Security (EMSEC) Policy issued by the Air Force CTTA, flexible armored cable used in conjunction with INTERCEPTOR is an approved PDS solution for CONUS US Air Force, Air National Guard and USAF Reserve bases, as well as off-base government locations operating at SECRET and below and TOP SECRET/SPECAT classification levels. The solution is also approved for OCONUS air bases and facilities operating at SECRET and below classification levels.*

### ***INTERCEPTOR Deployments***

- ***Air Force INTEL***
- ***Army INSCOM***
- ***CENTCOM***
- ***DHS***
- ***DIA***
- ***DOJ***
